

Scenario:

You are a first-year Computer Science student at the University of South Carolina. You have a lot of assignments and have trouble keeping track of all of them when they are spread across many different platforms. You would like to use the Course Dashboard website to try to resolve your problem.

Task 1:

View today's assignments in any way you prefer to make sure that you have completed them all.

Task 2:

You have to schedule a doctor's appointment, and you want to schedule it for November 12, 2020. Make sure you do not have any class assignments posted for that day.

Task 3:

You want to get a jump-start on some of the upcoming assignments for one of your classes. View all of the open assignments for CSCE 145.

Notes:

What changes you should make to your application (min 3 things):

1. Do not include previous assignments in the "New" section
2. Provide links to assignments on the "New" page
3. Include an indicator for unsubmitted assignments on the "Classes" page

What you need to keep the same for your application (min 3 things):

1. Permanent side-bar display
2. Permanent upcoming dates side-bar display
3. The website loads into the "New" section first as the home page
